## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. 7,220,795 (Miyoshi et al) further in view of U.S. 5,965,655 (Mordecai et al) as per reasons of record.

## Response to Arguments

3. Applicant's arguments filed October 10, 2008 have been fully considered but they are not persuasive.

It is maintained that it would have been obvious to one having ordinary skill in the art to have produce shaped articles from compositions meeting the requirements of the present claims in terms of the types of materials added. As to the specific use of two different polyamide components having different molecular weights, patentees' example 13 is noted.

Applicants argue that in the present invention, the specific surface area of the polyamide (A) is critical for achieving the excellent effects (e.g., coating adhesion strength) of the present invention. The specific surface area feature governing the presently claimed shaped article would appear to be directly correlated to the multi-phased morphology of applicants' composition. For example, on page 53 of the specification applicants disclose that when the polyamide component cannot form a continuous phase, the coating adhesion strength of the

Application/Control Number: 10/553,209 Page 3

Art Unit: 1796

shaped article suffers. Accordingly, given that the compositions of Miyoshi et al have a multiphased morphology wherein the polyamide component forms the continuous phase, one having
ordinary skill in the art would have expected patentees' shaped articles formed from a
composition meeting the material requirements of the present claims, said composition clearly
being within the purview of the general disclosure of the reference, to have a similar surface area
feature. Accordingly, absent evidence demonstrating that the presently claimed surface area
feature is unusual or unexpected, no patentability can be seen in the presently claimed subject
matter.

## Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ana L. Woodward whose telephone number is (571) 272-1082. The examiner can normally be reached on Monday-Friday (8:30-5:00).

Application/Control Number: 10/553,209 Page 4
